6 WaysAuditors Can Copewith the COVID-19 Crisis

The COVID-19 crisisistriggeringunprecedented and trying times for our society. Fromsubstantialrisks of overloading the health care system to catastrophiceconomichardships, the reverberations of thiscrisiswillbefelt for years to come in all spheres of activity. Auditors are alsoaffected and must take stock of how theywill manage throughthischallenging time. We consulted material from various professional audit associations and talked with a number of senior audit professional sacross Canada to find out how auditors can deal with COVID-19.

COVID-19 presents auditors with some challenges but also some opportunities. This list is in no way intended to be an exhaustive list of all the issues auditors are confronted with in this time of crisis.

Keep the health of auditors top of mind.

Humanresources are audit offices' best asset. Like for otherorganizations, the safety of their staff isparamount, and audit offices have actedaccordingly. They have rapidlyimplementedwork-athome solutions with an emphasis on protecting and preservingtheiremployees' health. As the crisisispersisting, and employees are workingremotely and implementing social distancingmeasures, audit organizationswillalso have to continue to beaware not only of theiremployees' physicalwell-being, but also of their mental health. Employee assistance programs and proactive efforts to connectwith team members to boosttheir morale are also essential to maintain the workforce and ensurecontinuity of operations.

Be flexible withauditees.

Transparent and effective communication withauditeesisalways a priority for auditors. In the time of COVID-19, thisistruerthanever. If auditors are wrapping up their audit and validating audit findings, this can probably be done remotely. But if they are starting an audit, it may be more problematic. They may have to moderate their requests for documents and data or allow more time for auditees to respond, especially if auditees are at the frontline of fighting COVID-19. Also, conducting interviews remotely is always a possibility but will be understandably more difficult. In instances, asking the auditees to complete a guestionnaire instead of some beinginterviewedmaybeless intrusive and more palatable for them. In anyevent, expect that audit activitieswilltake backseat and even. in some instances. а thatauditeeswillrequestthatauditorsstayaway for a while. In a time of crisis, flexibility is the order of the day.

Know thattechnology is the auditors' ally, with some caveats.

For manyworkers, technology has been providential in helping to deal with the COVID-19 crisis. Emails, shared drives, team management applications, cloud technologies, and videoconferences are allowingauditors to continue to workwithauditees and co-workers. However, as the online presence of auditors intensifies, they have to remain vigilant. This increased use of technologywillbeaccompanied by increasedtechnologicalrisks. From the overload of the telecommunicationsystems to cybersecurityconcerns, auditors' technologicalcapacitieswillbe more vulnerable. Ensuring that communications with auditees and between team members meet confidentiality and security requirements, for instance, could be a challenge. Also, there is an emerging risk of increased social engineering incidents. Phishing attacks masquerading as guidance about the virus are multiplying and can impact both auditors and auditees. It's essential that you be aware of these risks and have effective communications with your IT services.

Expectdelays.

Because many entities' activities and events are cancelled or delayed, it is only natural that the completion of audits will also be compromised. Many audit organizations have already factored this in and are recalibrating their audit plans. Depending on the flexibility of the audit mandate, the legalrequirements, the constraints on resources, and access to auditees, auditorswill have to be flexible and adjust. As statedabove, wrapping up audits maybee as ierthan starting new onesuntilthingssettle down. Also. as the crisis lingers, keeping audit teams offices mavconsiderassigning busymayproveproblematic. Some staff to beginperforminggroundwork for upcoming audits, conduct or undertake training (online of course), or form new methodologyworking groups.

Mitigate the risk to audit quality.

Auditors, beingalwaysmindful of audit standards, must crank up theirapprehensions about theircapacity to collectsufficient and appropriateevidence. This iswhere the aboveconcerns about technology, auditee relations, and delays come together. Auditors must take a good hard look atwhatthey are capable of doing in these circumstances. One opportunity that delays open up is the possibility of enhancing the quality of the audit by doing more in-depthanalysis of the

evidencealreadycollected. This couldbedone by leveraging quantitative data analyticstechniques or conducting qualitative analyses thatwouldbetoo time-consuming in normal times. It isalso possible thatyouwillneed to re-scope your audit to cover a more restrictedspan of activities. Professional judgment, as always, will have to beused.

Seize the opportunity to improveyourunderstanding of the auditedentities.

Good auditors must constantlyaim to increasetheirknowledge of the organizationsthey are auditing. Times of crisis have away of revealinghiddenweaknesses and organizationalfaultlines. This is not to saythatauditors must takeadvantage of auditedorganizations' temporaryvulnerability by playing a game of "bayonetting the wounded on the battlefield." But youshouldremainalert about areas of improvementthatmaybecome more apparent whenauditees are under stress. In particular, youcanlearn a lot by observing how risk management, the implementation of business continuity plans and disasterrecoveryactivities, and IT operations and cybersecuritymeasuresplay out duringthiscrisis. This mayprovideideas for future audit topics.
